                                                                        В
                                                                                                                    δÃ
                                                                                                                                                                                                                                                                                                     O (VEGF-D). VEGF-D can be used for e.g. acceleration of angiogenesis in wound healing, tissue or organ transplantation, or to establish collateral circulation in tissue infarction or arterial stenosis, such as coronary artery disease, and inhibition of angiogenesis in the treatment of cancer or of diabetic retinopathy. It can also be used in the treatment of lung disorders to improve blood circulation in the lung and/or gaseous exchange between the lungs and the blood stream or to improve blood circulation to the heart and O2 gas permeability in cases of cardiac insufficiency, to improve blood flow and gaseous exchange in chronic obstructive airway disease, or to treat malabsorptive syndromes in the intestinal tract. Quantitation of VEGF-D in cancer biopsy specimens may be useful as an indicator of future metastatic risk. Antagonists can be used for treating e.g. conditions such as congestive heart failure, invascular nermeability whe nordarts can also be useful concerns as in wasculations of fluid in the lung resulting from the invasculations and the lung resulting from the invasculations.

                                                                                                                                                                    CC coronary disease. Antagonists of the sequences are used to inhibit CC angiogenesis in tumours and to treat inflammation (where associated with CC increased vascular permeability), diabetic retinopathy, rheumatoid CC arthritis or psoriasis. Agonists are also useful for stimulating CC (lymph)angiogenesis. The proteins are also useful for raise antibodies. CC binding agents (potential therapeutic agents) and to raise antibodies. CC The antibodies are useful as therapeutic (ant)agonists; for detection, CC qurification and targeting of proteins for in vivo or in vitro diagnosis (c) (including imaging) or for therapy (including when linked to e.g. a label CC or cytotoxin); and for immunotyping of cells, e.g. for detecting minimal CC residual disease or haematopoietic progenitor/stem cells. It is also CC contemplated that the sequences might be useful for treating a very wide CC range of other disorders, e.g. autoimmune diseases; allergy; cancer; CC infectious diseases (viral, bacterial, fungal or parasitic); CC neurodegeneration, also as chemotactic agents or for stimulating CC regeneration of the nervous system etc.

                                                       The present sequence represents a human zvegf2 growth factor encoded by the zvegf2 cDNA which was isolated from a human heart cDNA library. zvegf2 protein in a dimeric form acts as a mitogen for fibroblasts or smooth muscle cells. zvegf2 is claimed to be useful for stimulating the revascularisation of tissue or the re-endothelialisation of vascular tissue. zveff2 is particularly claimed to be useful for the treatment of full-thickness skin wounds, including venous stasis ulcers and diabetic ulcers. The zvegf2 protein is also claimed to be useful as an additive in tissue adhesives for promoting revascularisation of the healing tissue. Antagonists against zvegf2 can be used to block its mijogenic, chemotactic and angiogenic effects. The antagonists may
                         mitogenic, chemotactic and angiogenic effects. The antagonists may therefore be useful for reducing growth of solid tumours by inhibiting neovascularisation of the developing tumour or by directly blocking
                                                                                                                                                                                                                                                                                 New isolated vascular endothelial growth factor - used to develop products for treating e.g. wounds, burns, myocardial infarction, tumours, psoriasis, arthritis, restenosis or organ transplants
                                                                                                                                                                                                                                                    Claim 1; Pages 53-54; 77pp; English.

          such as coronary artery disease, and inhibition of angiogenesis in the treatment of cancer or of diabetic retinopathy. It can also be used in the treatment of lung disorders to improve blood circulation in the lung and/or gaseous exchange between the lungs and the blood stream or to improve blood circulation to the heart and 02 gas
                                                                        The sequence is that of human lung vascular endothelial growth factor D (VEGF-D). VEGF-D can be used for e.g. acceleration of angiogenesis in wound healing, tissue or organ transplantation, or to establish collateral circulation in tissue infarction or arterial stenosis,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        vascular endothelial growth factor; VEGF-D; angiogenesis; modification; acceleration; wound healing; tissue; organ; transplants; collateral circulation; infarction; arterial stenosis; coronary artery disease; inhibition; cancer; treatment; diabetic retinopathy; lung disorders; blood circulation; gaseous exchange; chronic obstructive airway disease;
                                                                                                                                           Claim 16; Pages 60-61; 101pp; English.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              flow and gaseous exchange in chronic obstructive airway disease, or to treat malabsorptive syndromes in the intestinal tract. Quantitation of VEGF-D in cancer biopsy specimens may be useful as an indicator of future metastatic risk. Antagonists can be us for treating e.g. conditions such as congestive heart failure, involving accumulations of fluid in the lung resulting from increases in vascular permeability. The products can also be us for detection and diagnosis.
                                                                                                                                                                                                    The present sequence represents human vascular endothelial growth factor D (VEGP-D). The VEGF-D protein, compounds and antibodies, which can bind the protein, may be useful in, e.g. gene therapy and in treatment of inflammation and oedema. Vectors, containing the VEGF-D DNA, and VEGF-D DNA sequences may be used for screening for the compounds which bind to
                                                                                                                          Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 N-PSDB;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Human vascular endothelial growth factor D.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             AAW44293
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Sequence

                                                                                                                                                                                                                                                                                                                                                            CC (VEGF-X) protein (Ia) and its encoding polynucleotide (IIa) which has CC (VEGF-X) protein (Ia) and its encoding polynucleotide (IIa) which has CC vulnerary, cytostatic, antirheumatic, antiarthritic, antipsoriatic and CC antidiabetic activity and acts as an angiogenesis and vascularization CC regulator. An antisense molecule of the invention is useful for treating CC or preventing cancer, rheumatoid arthritis, psoriasis and diabetic CC retinopathy by inhibiting angiogenic activity or inappropriate CC vascularization including formation and proliferation of new blood CC vessels, growth and development of tissues, tissue regeneration and organ CC and tissue repair in a subject. The products of the invention are useful CC for preparing medicaments for treating wounds such as dermal ulcers, CC pressure sores, venous sores, diabetic ulcers and burns and to promote Skin graft growth, tissue repair proliferation of new blood vessels, cissue regeneration and organ repair by promoting angiogenic activity or vascularization. This sequence represents the human VEGD protein used

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                vascular endothelial growth factor receptor 3; VEGF Milroy-Nonne syndrome; lymphoedema praecox; VEGF-D; vascular endothelial growth factor D.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The present sequence is the protein sequence of the human vascular endothelial growth factor D (YEGF-D). It was used to demonstrate the methods of the invention, which involve the screening of individuals to determine which vascular endothelial growth factor receptor 3 (VEGFR-3, also known as Flt4 or fms-like tyrosine kinase 4) alleles they possess and thus their likelihood of developing hereditary lymphoedema. Conditions associated with lymphoedema include Milroy-Nonne syndrome,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     (LUDW-) LUDWIG INST CANCER RES.

                                                                                                                                                                                                                                                                                                                                                                   RESULT
                                                                                                                                                                                                                                                                                                                                                                                          CC referred as vascular endothelial growth factor receptor 3) in CC endothelial cells of blood vessels adjacent to malignant neoplasm. The CC endothelial cells of blood vessels adjacent to malignant neoplasm. The CC ilgand to Fit4 thereby inhibiting Fit4 mediated proliferation of vascular CC endothelial cells. The compound is useful for treating neoplastic disease such as breast carcinomas, squamous cell carcinomas, lymphomas, melanomas CC and sarcomas. Fit4 receptor tyrosine kinase binding compounds can be used CC for manufacturing medicament useful for diagnostic screening, imaging and CC treatment of malignancies characterised by Fit4-expressing blood cells. CC The Fit4 gene maps to chromosomal region 5q35 and is expressed as 5.8 kb CC and 4.5 kb mRNAs which differ in their 3' sequences and are CC differentially expressed in HEL and DAMI cell lines. Fit4 CC belongs to a subfamily of class III receptor tyrosine kinases (RTKs). CC It is used as a target for tumour imaging and anti-tumour therapy. CC factor D (VEGF-D), a specific example of Fit4 binding compound. A CC recombinantly matured VEGF-D lacking residues 1-92 and 202-334 CC retains the ability to activate VEGFR-2 and VEGFR-3 receptors and CC associate as non-covalently linked dimers.

```
The present amino acid sequence is the complete human prepro-vascular endothelial growth factor (VEGF)-D. VEGF-D has the ability to stimulate re-endothelialisation of an injured blood vessel, without significant stimulation of smooth muscle cell proliferation. It can bind to and stimulate VEGFR-2 (vascular endothelial growth factor receptor) and/or VEGFR-3 phosphorylation in cells that express such receptors. An
                           anti-restenosis agent comprising either a VEGF-D gene or protein is used in a method to reduce or prevent restenosis and stenosis of a blood vessel following vascular trauma e.g., cardiovascular surgery and percutaneous transluminal coronary angioplasty.
                                                                                                                                                                                                              Preventing stenosis and restenosis endothelial growth factor proteins
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Vascular endothelial growth factor-D; VEGF; human; re-endothelialisation; vascular endothelial growth factor receptor; VEGFR; vascular trauma; blood vessel; cardiovascular surgery; anti-restenosis agent; prevention;

                                                                                                                                                                                                                                                             The present invention relates to polypeptides that bind cellular receptors for vascular endothelial growth factors (VEGFs), the polynucleotides encoding them, and their use for identifying agents that modulate interactions between VEGFs and their receptors. VEGFs and their receptors play an important role in vasculogenesis, the development of the embryonic vasculature from early differentiating endothelial cells and angiogenesis, the process of forming new blood vessels from pre-existing ones. Modulators of interactions between VEGF and its receptors may be used to treat dysfunction of the endothelial cell regulatory system. Such disorders include cancers, abnormal angiogenesis, proliferative retinopathies, age-related macular degeneration, rheumatoid arthritis and psoriasis. The polypeptides of the invention exhibit unique receptor binding profiles compared to known naturally occurring VEGFs.

The present sequence represents the polypeptide for human VEGF-D.

No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

A:Title: cDNA clones for Brassica napus seed storage A; Reference number: A92836; MUID:84113267
A; Accessian: A01330
A; Molecule type: mRNA A; Residues: 1-133 <CRO>
                                                                                                                                                                                                     napin 1 precursor - rape (fragment)
N;Alternate names: 1.7S seed storage protein
C;Species: Brassica napus (rape)
C;Date: 18-Apr-1984 #sequence_revision 18-Apr-1984 #text_change 18-Jun-1999

           Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Score

LOATALYZES THE EXCISION NECLEASE IS A DNA REPAIR ENZYME THAT CATALYZES THE EXCISION REACTION OF UV-DAMAGED NUCLEOTIDE SEGMENTS PRODUCING OLIGOMERS HAVING THE MODIFIED BASE(S). ATTACHES TO THE UVRA-UVRB COMPLEX, DISPLACING UVRA, AND THE DAMAGED DNA STRAND IS NICKED ON BOTH SIDES OF THE DAMAGED SITE (BY SIMILARITY).

-I- SUBGNELLULAR COCATION: CYCOPLASMIC (BY SIMILARITY).

-I- SUBCELLULAR LOCATION: CYCOPLASMIC (BY SIMILARITY).

"CDNA clones for Brassica napus seed storage proteins: evidence from nucleotide sequence analysis that both subunits of napin are cleaved from a precursor polypeptide.";

J. Mol. Appl. Genet. 2:273-283(1983).

-i- FUNCTION: THE SMALL, BASIC, WATER-SOLUBLE NAPINS ARE ONE OF THE TWO MAJOR KINDS OF STORAGE PROTEINS SYNTHESIZED IN THE SEED DURIN ITS MATURATION.

-i- SUBUNIT: THE MATURE PROTEIN CONSISTS OF A SMALL AND A LARGE CHAIN
                                                                                                                                                                                                                                                                                                                                                                                                         Brassica napus (Rape),

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
